Looking For The Effects Of Cell Therapy? We Have A Complete List Of All The Major Side Effects Of Cell Therapy

A lot has been said about the benefits of stem cell therapy but people fail to acknowledge the fact that it might have some side effects too. The side effects of stem cell therapy are alike those which you will have during chemotherapy. These effects of stem cell therapy are also bound to occur considering the large amount of strong drugs and therapy recommended towards the treatment and administration of stem cell therapy. Depending on person to person, these [Side Effects Of Stem Cell Therapy](#) might not be visible in all individuals in the same way.

When talking of effects of stem cell therapy it is can be very easily assumed that after the procedure one will have a low white blood cell count. This means you are more at risk of getting an infection. Bad effect of stem cell therapy will result in your red blood cell count decreasing after your treatment. If it falls too low you will feel very tired, exhausted and lacking in energy. You may also feel breathless when you move around.

Another common effect of stem cell therapy is the feeling of having a sore mouth and mouth ulcers. These develop as a reaction to chemotherapy or radiotherapy or from a mouth infection. The other side effect of stem cell therapy is that it will make you will feel very tired and run down. This will be at its worst during the second and third week when your blood counts are at their lowest. Apart from these short term effects, a major long term side effect associated with stem cell therapy is that of infertility. This means you will no longer be able to have children. This situation mainly arises because of the high doses of chemotherapy involved during the therapy.
